

## **PERIOPERATIVE MANAGEMENT OF MAT PATIENTS**

Postoperative pain management of patients on buprenorphine and methadone poses a challenge for several reasons:

1. Opioid-induced Hyperalgesia: Patients on maintenance therapy for opioid use disorder with buprenorphine and methadone undergo changes in pain perception, leading to increased pain sensitivity. A procedure done under local anesthesia may be well-tolerated by a patient not on maintenance therapy, while the same procedure would cause more significant pain issues in a patient on maintenance therapy.
2. Cross-tolerance: The presence of buprenorphine or methadone impedes the ability of more potent opioids with better analgesic effects from attaching to the opioid receptor. This leads to more difficult pain control, and explains the higher doses of opioid analgesics that are necessary to adequately treat the pain of patients on maintenance therapy.
3. Concern from the provider that providing opioid analgesics will lead to illicit drug use.
4. Concern from the provider that the increased pain reports may be an attempt to obtain more opioids.

| <b><u>Buprenorphine</u></b><br><b><u>Doses</u></b> | <b><u>Oxycodone</u></b> | <b><u>Morphine</u></b> | <b><u>Heroin</u></b> | <b><u>Methadone</u></b> |
|--|-------------------------|------------------------|----------------------|-------------------------|
| 2 mg   | 30 mg                   | 60 mg                  | 1-2 bags             | 10 mg                   |
| 4 mg   | 60 mg                   | 120 mg                 | 3 bags               | 20 mg                   |
| 6 mg   | 90 mg                   | 180 mg                 | 4 bags               | 30 mg                   |
| 8 mg   | 120 mg                  | 240 mg                 | 6 bags               | 40 mg                   |
| 12 mg  | 180 mg                  | 360 mg                 | 8 bags               | 60 mg                   |
| 16 mg  | 240 mg                  | 480 mg                 | 10 bags              | 80 mg                   |

### **Perioperative Management of the Buprenorphine Patient**

1. Perioperative pain management is at the discretion of the practitioner performing the procedure.
2. Perioperative pain management should be part of the conversation/consent process for the procedure so that the patient knows what to expect. If a patient needs to have their buprenorphine modified at the provider's request pre-operatively, the patient needs to be informed of this and give consent before doses are temporarily modified.
3. In most instances, patients maintained on buprenorphine for opioid use disorder should continue buprenorphine through the perioperative period.
  - a. Patients taking more than 12mg of buprenorphine daily:
    - i. Pre-op: Taper to 12mg/day over 2-3 days prior to surgery.
    - ii. Day of surgery: continue buprenorphine 12mg/day; multi-modal analgesia and/or regional anesthesia; if prescribing opioids, be aware that patients on buprenorphine require higher dose than opioid-naïve patients.
    - iii. Post-op: Continue buprenorphine 12mg/day; patient may need full agonist for 2-4 days; higher level monitoring may be necessary; return to patient's regular dose of buprenorphine as soon as possible.
  - b. Patients taking 12mg of buprenorphine daily or less:

- i. Pre-op: Continue normal dose of buprenorphine.
  - ii. Day of surgery: continue normal dose of buprenorphine; multi-modal analgesia and/or regional anesthesia; if prescribing opioids, be aware that patients on buprenorphine require higher dose than opioid-naïve patients.
  - iii. Post-op: Continue normal dose of buprenorphine; patient may need full agonist for 2-4 days; higher level monitoring may be necessary.
4. Non-opioid medications such as local anesthetics (lidocaine or bupivacaine), NSAIDs (e.g. ketorolac, ibuprofen, meloxicam), and acetaminophen among others do not act via the opioid receptors and will therefore not be impeded by buprenorphine. Generously utilizing these non-opioid medications are key to managing pain in patients with opioid use disorder.
5. Inadequately treating pain in patients with opioid use disorder is more likely to cause a relapse than adequate analgesia.
6. Acute pain with objective findings requires adequate analgesia, with the determination to use opioid or non-opioid agents being at the discretion of the practitioner performing the procedure.
7. The patient's dose of buprenorphine may be split to every 12 hours or every 8 hours to maximize the analgesics of buprenorphine for the patient experiencing post-operative pain.
8. The MAT Medical Director can be contacted for consultation

### **Perioperative Management of the Methadone Patient**

1. Perioperative pain management is at the discretion of the practitioner performing the procedure, and post-operative pain management should be part of the conversation/consent process for the procedure so that the patient knows what to expect.
2. Doses of methadone are not typically held.
3. Non-opioid medications such as local anesthetics (lidocaine or bupivacaine), NSAIDs (e.g. ketorolac, ibuprofen, meloxicam), and acetaminophen among others do not act via the opioid receptors and will therefore not be impeded by methadone. Generously utilizing these non-opioid medications are key to managing pain in patients with opioid use disorder.
4. Because of the cross-tolerance of patients of methadone to other opioids, providers should be aware that higher doses of opioid analgesics may be required to achieve adequate pain relief.
5. Inadequately treating pain in patients with opioid use disorder is more likely to cause a relapse than adequate analgesia.
6. Acute pain with objective findings requires adequate analgesia, with the determination to use opioid or non-opioid agents being at the discretion of the practitioner performing the procedure.
7. The MAT Medical Director can be contacted for consultation.

**Perioperative Management of the Naltrexone Patient**

1. Oral naltrexone must be discontinued 3 days prior to procedure. Intramuscular naltrexone lasts 28 days and must be switched to oral naltrexone, which must be discontinued 3 days prior to procedure.
2. Discontinuation of naltrexone prior to an elective surgery presents a particularly vulnerable time for relapse for a patient with opioid use disorder.
3. Perioperative pain management is at the discretion of the practitioner performing the procedure. Discussion about naltrexone and pain management should be part of the conversation/consent process for the procedure so that the patient knows what to expect.
4. Non-opioid medications such as local anesthetics (lidocaine or bupivacaine), NSAIDs (e.g. ketorolac, ibuprofen, meloxicam), and acetaminophen among others do not act via the opioid receptors and will therefore not be impeded by naltrexone. Generously utilizing these non-opioid medications are key to managing pain in patients with opioid use disorder.
5. Because of the antagonistic effects of naltrexone, providers should be aware that higher doses of opioid analgesics given in a monitored setting may be required to achieve adequate pain relief.
6. Acute pain with objective findings requires adequate analgesia, with the determination to use opioid or non-opioid agents being at the discretion of the practitioner performing the procedure.
7. The MAT Medical Director can be contacted for consultation.

### TCU DRUG SCREEN V

During the last 12 months (before being locked up, if applicable) –

|  | Yes   | No                    |
|--|---|-----------------------|
| 1. Did you use larger amounts of drugs or use them for a longer time than you planned or intended? .....   | <input type="radio"/>   | <input type="radio"/> |
| 2. Did you try to control or cut down on your drug use but were unable to do it? .....   | <input type="radio"/>   | <input type="radio"/> |
| 3. Did you spend a lot of time getting drugs, using them, or recovering from their use? .....  | <input type="radio"/>   | <input type="radio"/> |
| 4. Did you have a strong desire or urge to use drugs? .....  | <input type="radio"/>   | <input type="radio"/> |
| 5. Did you get so high or sick from using drugs that it kept you from working, going to school, or caring for children? .....  | <input type="radio"/>   | <input type="radio"/> |
| 6. Did you continue using drugs even when it led to social or interpersonal problems? ...  | <input type="radio"/>   | <input type="radio"/> |
| 7. Did you spend less time at work, school, or with friends because of your drug use? ....   | <input type="radio"/>   | <input type="radio"/> |
| 8. Did you use drugs that put you or others in physical danger? .....  | <input type="radio"/>   | <input type="radio"/> |
| 9. Did you continue using drugs even when it was causing you physical or psychological problems? .....   | <input type="radio"/>   | <input type="radio"/> |
| 10a. Did you need to increase the amount of a drug you were taking so that you could get the same effects as before? .....   | <input type="radio"/>   | <input type="radio"/> |
| 10b. Did using the same amount of a drug lead to it having less of an effect as it did before? .....   | <input type="radio"/>   | <input type="radio"/> |
| 11a. Did you get sick or have withdrawal symptoms when you quit or missed taking a drug? .....   | <input type="radio"/>   | <input type="radio"/> |
| 11b. Did you ever keep taking a drug to relieve or avoid getting sick or having withdrawal symptoms? .....   | <input type="radio"/>   | <input type="radio"/> |
| 12. Which drug caused the most serious problem during the last 12 months? [CHOOSE ONE]   |   |                       |

14. How many times before now have you ever been in a drug treatment program?  
[DO NOT INCLUDE AA/NA/CA MEETINGS]

- Never     1 time     2 times     3 times     4 or more times

15. How serious do you think your drug problems are?

- Not at all     Slightly     Moderately     Considerably     Extremely

16. During the last 12 months, how often did you inject drugs with a needle?

- Never     Only a few times     1-3 times/month     1-5 times per week     Daily

17. How important is it for you to get drug treatment now?

- Not at all     Slightly     Moderately     Considerably     Extremely

## **MAT Care Coordination for Inmates Releasing on MAT into the Community**

Upon entering a Vermont Correctional Facility all Opioid Use Disorder Screening, Assessment, COWS taper (narcotic and non-narcotic), medically necessary MAT Induction, counseling and behavioral therapies will be provided based on current policies, protocols and clinical guidelines and comply with Vermont and Federal law.

1. During the MAT Medical determination assessment process, the nurse completing the medical intake, or the MAT Case Manager(s) will verify, with the inmate, which community they will release to, the date of their release, and the potential community treatment provider(s) they intend to use. The nurse doing the medical intake, or the MAT Case Manager will complete provide the inmate: an ROI, provide patient information about HUBS/Community Spokes and MAT FAQ to support continuity of care.
2. The MAT Care Coordinator will confirm the inmate's release date with the facility Living Unit Supervisor (LUS) and/or Caseworker and the LUS/ Caseworker will notify medical if there are any changes.
3. When the inmate's release date is confirmed or estimated, the MAT Care Coordinator will make appointments with community-based providers. If an inmate is removed from MAT, the MAT Care Coordinator will notify the LUS/Caseworker.
4. The MAT Care Coordinator will document referral status and appointment(s) in the EHR using the MAT-Induction Discharge UDR. (Information from this UDR auto-populates into Discharge Summary UDR). As part of the UDR, the MAT Care Coordinator is required to remind the inmate that the HUB requires them to provide a photo ID and insurance information.
5. The MAT Care Coordinator will, as per the ROI, provide the Community based provider with health information necessary to MAT care coordination that will include: overview, medications, last history and physical, last CIC, and labs.
6. The MAT Care Coordinator will continue to provide the facility LUS/Caseworker and field Probation office (if relevant) all MAT care coordination information to ensure a seamless transition to the community.
7. Nursing will print off and provide the inmate and the LUS/Caseworker with a "Discharge Summary." The Discharge Summary will include community referral appointment date/days/times, MAT community-based resource information, a last dose letter (also completed by nursing), and any additional comments to be relayed to the inmate. If a MAT bridge dose is needed in cases where the last dose provided in facility is not sufficient to dose the inmate up until the date and time of the community-based appointment, it will be called into the Walgreen's/Rite-Aid pharmacy of inmate's choice

by nursing for the number of days needed (days from last dose to day of community based provider appointment).

## **RAPID RELEASE**

1. The MAT Care Coordinator will have daily communication with the facility LUS and caseworker(s) and will be informed by them of a rapid release.
  - a. If the inmate is on MAT, the MAT Care Coordinator will follow existing MAT Care Coordination procedure.
  - b. If the inmate is not on MAT but the provider determined that they meet medical necessity prior to release, the MAT Care Coordinator will contact medical provider to determine if there is enough time to safely induct the inmate.
2. If the medical provider determines that MAT induction is possible, medically necessary and safe, the inmate will be inducted as per existing policies, protocols and clinical guidelines. The medical provider will inform the MAT Care Coordinator who will then inform the facility LUS and/or caseworker.
  - a. The MAT Care Coordinator will schedule an appointment with the community provider named on the ROI to inform them of the inmate's rapid release and send the medically necessary health information.
3. If the medical provider determines that MAT induction is not medically necessary or unsafe to do so, the inmate will be informed by facility level nursing. Nursing will also inform the MAT Care Coordinator and MAT Case Management who will then inform DOC LUS/Caseworker.
4. Once the inmate is released, should they contact Centurion to request that their health information be sent to a provider different than the ROI on record, the Centurion Health Services provider will direct the person to sign a release with the provider of their choice, and fax to Centurion Regional Office (802-224-1935). Once the MAT Care Coordinator as received the new ROI, the health information will be sent by as soon as possible but within two business days.

### Clinical Opiate Withdrawal Scale (COWS)

*Flowsheet for measuring symptoms over a period of time during buprenorphine induction.*

For each item, write in the number that best describes the patient's signs or symptom. Rate on just the apparent relationship to opiate withdrawal. For example: If heart rate is increased because the patient was jogging just prior to assessment, the increased pulse rate would not add to the score.

|   |                                  |   |  |  |  |
|---|----------------------------------|---|--|--|--|
| Patient Name: _____   |                                  | Date: _____   |  |  |  |
| Buprenorphine Induction: _____  |                                  |   |  |  |  |
| Enter scores at time zero, 30 minutes after first dose, 2 hours after first dose, etc.  |                                  | Times of Observation:   |  |  |  |
| <b>Resting Pulse Rate: Record Beats per Minute</b>  |                                  |   |  |  |  |
| Measured after patient is sitting or lying for one minute   |                                  |   |  |  |  |
| 0 = pulse rate 80 or below  |                                  | 2 = pulse rate 101-120  |  |  |  |
| 1 = pulse rate 81-100   |                                  | 4 = pulse rate greater than 120   |  |  |  |
| <b>Sweating: Over Past 1/2 Hour not Accounted for by Room Temperature or Patient Activity</b>   |                                  |   |  |  |  |
| 0 = no report of chills or flushing   |                                  | 3 = beads of sweat on brow or face  |  |  |  |
| 1 = subjective report of chills or flushing   |                                  | 4 = sweat streaming off face  |  |  |  |
| 2 = flushed or observable moistness on face   |                                  |   |  |  |  |
| <b>Restlessness Observation During Assessment</b>   |                                  |   |  |  |  |
| 0 = able to sit still   |                                  | 3 = frequent shifting or extraneous movements of legs/arms                                |  |  |  |
| 1 = reports difficulty sitting still, but is able to do so  |                                  | 5 = Unable to sit still for more than a few seconds                                       |  |  |  |
| <b>Pupil Size</b>   |                                  |   |  |  |  |
| 0 = pupils pinned or normal size for room light   |                                  | 2 = pupils moderately dilated   |  |  |  |
| 1 = pupils possibly larger than normal for room light   |                                  | 5 = pupils so dilated that only the rim of the iris is visible                            |  |  |  |
| <b>Bone or Joint Aches if Patient was Having Pain Previously, only the Additional Component Attributed to Opiate Withdrawal is Scored</b> |                                  |   |  |  |  |
